

# Frequently Asked Questions

## How long will the tan last?

With proper care, typically a minimum of 7 days. Revisit the provided PREP sheet to be sure you are aware of pre & post-tan procedures + tips!

## When should I get my spray tan?

We recommend getting your spray tan 2 days PRIOR to your event! This allows the tan to settle within in the skin for a natural look. ex: event is on a Saturday, so get your tan on a Thursday!

## Will I be orange?

No! The reason spray tans are "orange" is typically because of the ingredients the formula is made with, but also the artist or booth you are using may be spraying you with a solution that is not the proper tone for your skin. We have 8-10 formulations of solution and take pride in matching your skin tone and color depth perfectly!

## Is the spray tan sticky or stinky??

Not at all! Once we have completed application, we apply an amazing drying powder to be sure you feel most comfortable! The formulas we carry have no scent or some smell like warm vanilla sugar (yum!) .

## How does it hold up in water or at the pool/beach?

Excessive sweat, sand, salt/chlorinated water can break down the life of the tan faster than usual. Using non-aerosol sun care, patting to dry after bathing or swimming (NEVER rubbing the skin) and moisturizing often will extend the life of the tan. AVOID HOT TUBS AT ALL COSTS.

## I'm pregnant or nursing..is a spray tan safe for me?

You must consult your doctor first. We always want to be safe and referring back to them is key. Should you spray tan when pregnant, we can provide nose filters for you. If you are nursing, we can provide nipple covers for you. We will not spray tan clients 15 weeks and under without a doctors note.
